EO Commercialization and Φ -lab mission

Evropská kosmická agentura

The Φ -lab is a concept which aims to accelerate the future of EO via transformational innovation. Inside the lab there are two office one is a research and exploration office focusing on disruptive technologies such as AI, distributed systems, quantum computing & applied algorithm development. The other office focuses on supporting and developing the commercial EO sector along the EO value chain through the InCubed programme. This presentation will provide an overview of the Φ -lab, its latest activities and how to get involved.
